

BLOCKCHAIN AGRO TRADING TOKEN PRE-SALE

OUR VISION: EVERYONE CAN BE SUCCESSFUL AGRO TRADER

At the moment, the world market of cereals is **filled with small and medium companies**. One of the main problems is that they find it difficult to establish contact together. Companies have to resort to the services of intermediaries, sometimes even chains of them. Such chains are extremely risky and do not guarantee the receipt of real profits from transactions, but on the contrary, can even bring losses. **Blockchain Agro Trading poses a task to solve this problem.**

We will help to find the **best solution** for buyers and sellers by increasing **security** and **transparency** of transactions, as well as ensuring a **high transaction speed**. The grain market should be accessible to everyone.

OUR ROAD MAP: FROM IDEA TO THE FINAL PRODUCT

 **2018** Writing White Paper, the smart contract, the business plan and creating a web-site, conducting legal consultations, conducting Pre-Sale, registration in the jurisdiction of Switzerland (Zug), the development of a web-platform, testing the alpha version of the platform, purchase of granaries (elevators), development and installation a centralized system of sensors and system of alerts.

 **2019** Development of the decentralized payment management system, development of the fault-tolerant web-platform infrastructure and system of readings, integration of sensor readings into the web-platform.

 **2020** Installation of sensors for all authorized partners of our company, connection of sensors to the system of readings. Access to the market.

BLOCKCHAIN AGRO TRADING - MORE THAN JUST GUARANTEE

We **diversify risks** for the seller and the buyer, using high-tech **conductometric cereals, humidity sensors with flat measuring electrodes**, installing them at the reception point of grain crops with **automatic data entry into the smart-contract** platform. The platform opens an opportunity to **buy cereals by those characteristics and the price at which the seller sent the raw materials to the storage**. The buyer can freely see class, grade, humidity and weediness of grain in all granaries in the world and choose the optimal price-quality option, without questioning about the risks and purity of the transaction.

After registration of a smart-contract for the transaction, **we will assume all logistical and transport tasks**, delivering grain from our elevators to the place specified by the buyer.

OUR TEAM: ENTHUSIASM, KNOWLEDGE AND EXPERIENCE

Kopylov Vyacheslav
CEO, founder

Yaroslav Osolikhin
CFO

Vladislav Ponomarenko
DevOps Engineer, co-founder

Zudikov Andrii
System Analyst

Ovcharenko Andrey
CTO

Ivan Lomovtsev
Fullstack Developer
